4. 2010 SALIS Conference
5. CAS Library Hour Review
6. Tech Tip: Saving, Storing and Sharing Citations with Web 2.0
7. New Face in the Library: Frank Jolliffe

1. Bibliometric Tools Revisited

Numerous new tools can be useful for bibliographies, including Amazon's citation feature and a full text US patent search. CAS librarians stress the idea of using a variety of citation analysis tools, many of which are free, in order to gather the best possible data.

Citations [\(learn more\)](#)

100 books cite this book:

A screenshot of the United States Patent and Trademark Office (USPTO) website. The header includes the USPTO logo and the text 'UNITED STATES PATENT AND TRADEMARK OFFICE' and 'An Agency Of The United States Department Of Commerce'. Below the header, it says 'Patent Full-Text and Full-Page Image Databases'. The main content area is divided into two columns. The left column is titled 'Important Notices and Policies - Please Read!' and contains a section for 'PATFT: Issued Patents' (Full-text since 1976, full-page images since 1980) with links for 'Quick Search', 'Advanced Search', 'Patent Number Search', 'View Patent Full-Page Images', 'Status and Event History', 'Database Contents', 'Help Files', 'Report Data Errors', and 'Report Problems'. The right column is titled 'How to Access and View Full-Page Images' and contains a section for 'AppFT: Patent Applications' (Published since March, 2001) with links for 'Quick Search', 'Advanced Search', 'Publication Number Search', 'View Publication Full-Page Images', 'Status and Event History', 'Help Files', 'Report Data Errors', and 'Report Problems'.

To better organize the tools, library staff created a chart comparing the various resources and included coverage, provider and availability information. Below is a small section from the chart.

Name	URL	Coverage	Provider	Free, Sub
Chemical Abstracts/SciFinder/Scholar	http://www.cas.org/scifinder	<ul style="list-style-type: none"> • Chemistry; Chemical aspects of: <ul style="list-style-type: none"> • astronomy • biology • education • engineering • economics • geology • history • mathematics • medicine • physics Journal articles; patents; conference proceedings; Tech Reports; Books; Dissertations; Reviews	Chemical Abstracts Service (CAS), division of the American Chemical Society	Sub
NASA Astrophysics Data System Abstract Service	http://adsdoc.harvard.edu	<ul style="list-style-type: none"> • Astronomy and Astrophysics • Instrumentation • Physics and Geophysics • ArXiv Preprints Journal articles; conference proceedings; observatory reports and newsletter; NASA reports; PhD Theses	Smithsonian Astrophysical Observatory (SAO), NASA	Free

Scopus	http://www.scopus.com/scopus/home.url	<ul style="list-style-type: none"> • Scientific • Technical • Medical • Social Sciences (Arts & Humanities) Journal articles; books; conferences; scientific web pages; patents	Elsevier	Sub
Scitation/Spin Web	http://scitation.aip.org/	<ul style="list-style-type: none"> • Science • Engineering Journal articles; conference proceedings; standards	American Institute of Physics' Online Journal Publishing Service	Free

2. Comparing Substance Abuse Journals

The Library staff produced a spread sheet comparing substance abuse journals during the spring semester. The information in the spreadsheet compares journals across a range of data points, including Impact Factor, Acceptance and Rejection Rates, Time to Acceptance and Time to Publish. The Library compiled this information from a variety of resources including Web of Science and Ulrich's (both subscriptions held by Rutgers University Libraries) and the Journals' website and other sources. The Library can now use this resource to aid CAS Faculty and Staff when researching journals.

3. Library Hour Spring 2010

The staff of the Center of Alcohol Studies Information Services Division presented an hour “state of the union” style spring roundup to the faculty and staff of the Center of Alcohol Studies on April 26, 2010. The overall theme was on citation analysis and bibliometrics. The librarians (James Cox, Molly Stewart, and Judit Ward) showed off their research projects from the spring semester based on faculty and staff information requests. The Library staff (including David Eisenberg and Laura Panos graduate assistants) also presented their poster accepted at the New Jersey Library Association (NJLA) 2010 Conference. The poster was displayed to the NJLA attendees on April 28, 2010. Paul Candon of the Journal of Studies on Alcohol and Drugs presented an abbreviated version of his Substance Abuse Librarians & Information Specialists (SALIS) talk during the second half of the Library Hour. Mr. Candon spoke about the various bibliometric tools from a publisher’s perspective. He also spoke about qualitative ways to determine the authority of journals and scholarly presses. The Library and Journal are working in tandem to promote the Journal and increase readership.

4. NJLA Poster Presentation: Bringing Data Back from the Grave

The 2010 New Jersey Library Association Annual Conference was held in Long Branch, NJ, May 26-28. This year's conference focused on the essential function libraries serve to their community and included a poster from CAS Library, entitled *Bringing data back from the grave: bridging the generation gap among software applications*. Molly Stewart, Laura Panos and David Eisenberg were on hand to present the poster, created with the help of librarians Judit Ward and James Cox, and to answer any questions. The poster focused on restoring archival data from the Alcohol History Collection that had previously been lost to outdated software. The poster was a hit among conference attendees, with several commenting on the importance of the project, as technology is constantly changing and growing.

Bringing Data Back from the Grave

Bridging the Generation Gap Among Software Applications

Judit H. Ward, Dave Eisenberg, Laura Panos, Molly Stewart, and James W. Cox
Center of Alcohol Studies, Rutgers University

THE PROBLEM

Libraries and information technology become more interdependent every day. However, as technology moves rapidly into the future, libraries may risk older information becoming unusable and even lost.

Following a major hardware and software update the Center of Alcohol Studies Library at Rutgers University found that previously successful software was not compatible with current operating systems installed on Library computers.

Unfortunately, this software application provided access to significant data, including materials from the Library's unique Alcohol History Collection (17th-20th centuries), a substantial body of historic alcohol-related literature.

Five databases were originally stored on library database software called *Imagic DB/Textworks Version 7.0*, no longer compatible with the current operating system. Retrieving the data also involved reestablishing the same network paths by which the original software once functioned on our systems.

ASSESSMENT OF THE SITUATION

The materials at the CAS Library can currently be accessed in a number of ways. The Library's primary database, the Alcohol Studies Database, holds over 60,000 citations for journal articles, books, book chapters, dissertations, conference papers, and audiovisual materials (1900-2007). It's currently available online from Rutgers University Libraries, with links to the full-text articles.

The Alcohol History Collection contains unique materials of interest to the general public, students, researchers, and educators in alcohol studies. The subject matter in the collection covers a wide range of issues from the American Temperance and Prohibition Movements such as social and domestic problems due to alcoholism, legislation and enforcement laws, and the alcohol beverage industry.

The Library also holds the Ralph G. Connor Alcohol Research Reference Files (CARRF), a unique collection of approximately 700 questionnaires, interview schedules and survey instruments used in alcohol research with additional references to articles that used the survey. The primary focus of this collection is on various aspects of drinking behavior and alcoholism, although some instruments dealing with other drugs of abuse are included.

Access is provided by a published print inventory and by the in-house database. Documents in electronic format are also available upon request.

SOLUTION?

The library considered many options for migration, by searching software documentation, calling vendors directly and reading relevant technical blogs. Complicating the difficulty of migration, the outmoded *Imagic* software would only export into a "dump" file that most current software no longer would support. It was ultimately decided that *FileMaker Pro* was the best option for compatible migration to a platform that could be easily supported technically and financially. *FileMaker* proved to work nicely, and the library was able to perform an easy import of data with little reconstitution necessary to make it fully functional.

Presently, the Alcohol History Collection can only be accessed by visiting the CAS Library's special collections. However, bibliographic records can be searched on the Rutgers University Library's website through the Alcohol History Database. The collection contains monographs, pamphlets, periodicals and graphic materials, and includes biographies and personal stories, fiction, religious and ethical viewpoints, scientific and medical essays, and literature from influential organizations of the time.

Computers needed to be identified that were once used to run this software before it was removed from the systems. Files from the data backup were then restored, some copied to the network location while others would be placed into the original file folders on the individual computers that once held the data. Once the systems were successfully mimicking the original network and local file structure of the deceased machinery, the outmoded software could once again be initiated, and the data could be exported back from the grave.

The library plans to extract the data out of *Imagic* and into a format that would be more user-friendly.

The CAS Library has been currently exploring options to integrate all its databases into a single platform, with Library-wide search capabilities. In addition to the difficulties with technology and inequalities of metadata,

5. 2010 SALIS Conference

The 32nd Annual Conference of Substance Abuse Librarians and Information Specialists was held at National Center on Addiction and Substance Abuse at Columbia University, in the Zena & Michael A. Wiener Conference Center. Among the presentations by SALIS members and local experts invited by host David Man, the Center of Alcohol Studies was also well represented. The conference opened with the keynote presentation by Dr. Robert Pandina, Director of the Center of Alcohol Studies, entitled *Scientific Publishers: Gatekeepers of Human Knowledge*. Dr. Pandina's expressive and entertaining reflections on scholarly publication and the impact of librarians in the field were unanimously appreciated by the diverse audience. In his talk *Used and Abused: Bibliometrics in Addiction Research*, Paul Candon, Managing Editor of the Journal of Studies on Alcohol and Drugs, reviewed the wealth of journal metrics and their use in addiction publishing from the editor's perspective. Judit Ward's presentation *Are we on the same page? Bibliometrics on the move* assessed the changing landscape of bibliometric tools for substance abuse librarians through the citation data from the Health and Human Development Project of the Center of Alcohol Studies.

6. Tech Tip: Saving, Storing and Sharing Citations with Web 2.0

Looking for a way to save, store or share scholarly papers while browsing the web? Free social bookmarking sites such as citeulike (www.citeulike.org) and Connotea (www.connotea.org) allow users to do just that.

You can share your library with other researchers and also view other users' libraries.

With just one click these tools will extract the citation data from a paper and import it into your personal library. Similar to RefWorks and webpage booking, social bookmarking tools are a hybrid of the two.

Clicking on article title will link to full text availability.

Organize articles by assigning "tags" (keywords)

7. Welcome Frank Jolliffe

Frank Jolliffe is the Technical Services Librarian at Bank Street College of Education, where he catalogs unique institutional materials and publications and provides reference to faculty, graduate students and the School for Children students. Recently awarded a research grant along with three of his Bank Street colleagues, he is working to develop a Faculty/Student exchange program with educators in India. In 2007 he was a Research Associate and Cataloger for Columbia University's Jazz Studies Online project, reviewing resources and writing metadata for the website. Currently he is a consultant at Rutgers Center of Alcohol Studies helping develop a web-based interface that will facilitate access to the historical collection of books, images, instruments, and articles. Frank holds a Master's of Library and Information Science from Rutgers University and a Bachelor of Music in Jazz Studies from William Paterson University.

Have a Great Summer!
